Probe into the Key Role of Interior Design Innovation
Shangqiu Cao and Jun Yan
(Jingdezhen Ceramic Institute, 333000, Jingdezhen, Jiangxi, China)

Keywords: interior design innovation; key role; form of expression

Abstract: With the rapid development of the construction industry, people's demand for taste is also rising, for construction houses, people have not only limited to the function of living, but also hope that based on design innovation to meet people's diverse taste. At the same time, interior design innovation, Interior designers also pursued the state. The key role of interior design innovation are not only to create a comfortable living environment for people, but also to meet people's spirit demand of the times.

1. Introduction
Interior design is the derivative industry of the construction industry, along with the vigorous development of the construction industry and innovation. Interior design and people's needs are closely related to the rapid development of the economy in the background, people's needs improve continually, people's taste is also constantly optimized, people are thinking of the sum for interior design recognition and spiritual to a certain extent, interior design innovation. For the vast number of interior designers, innovation is also the rise of this industry which is the foundation, but also the majority of designers continue to grind, forge ahead with the goal. On the whole, the interior design style or form, all reflect the people's current needs and taste. As an interior designer, we must pay attention to meet the real needs of people, while focusing on inspiration from the multi-source, in order to promote the innovation of interior design, but also to play a key role in interior design innovation.

2. Design of Interior Design Innovation
Interior design and people's needs are closely integrated, but also role in people's needs, whether it is living needs or work needs, or enjoy the needs of designers only focus on the evolution of people's needs, while the integration of more modern elements to be effective to enhance the overall level of interior design, but also to promote the continuous innovation of interior design. The main manifestations of current interior design innovation can include the following:

2.1 Innovative Space Combination Form
In the process of interior design innovation, the form of space combination is more intuitive touch point, whether it is life or work in the indoor people, the first sensory impression lies in the different combinations of indoor space. For a long time, people in the process of interior design, and did not pay attention to the organic combination of space, but still use the traditional model and routines, which will undoubtedly reduce the quality of interior design, it is difficult to enhance people's good perception. [Song Changming, the key role of interior design innovation [J], urban construction theory: electronic version, 2013 (29): 34-36.] Based on this, in the interior design innovation process, you can take the lead in space combination to carry out effective innovation, to give people the most intuitive innovation experience, in order to promote the development of interior design, to meet people's real needs all-round. Of course, in the process of reorganization or reconstruction of interior space, we must fully integrate the scientific concept of interior design, must fully fit the indoor space conditions, we should not blindly design, should not copy, and we must to accurately optimize the space combination based on special problems of special design principles.
2.2 Innovative interior Design Materials

In the interior design process, the material is the first factor, the material is the carrier, it is the foundation, but also the main focus of innovative indoor design. In the interior design process, we still need to use traditional materials. But in order to highlight the innovative design of interior design, in order to enhance the overall quality of interior design, we need the appropriate transformation of traditional materials, so that the glow of different times of the atmosphere. Blindly abandon the traditional material, not the starting point of innovative indoor design, but the comprehensive use of traditional materials, to break the traditional use of traditional materials, the only way to fully enhance the overall level of interior design, but also to promote the innovation and development of interior design. Of course, in the new materials and new technologies continue to introduce today, in the interior design process, we also need to strengthen the scientific use of new materials, and constantly expand the use of new materials, need to pay more attention to the organic material between the organic match in order to achieve a different spatial area division. For example, in the large public building area of the interior design, the use of textures or different colors of the material, without the need for mandatory partition or division of the home, from the appearance or shape, you can determine the difference. In addition, with the emphasis on the use of environmentally friendly materials in interior design and application, with the people's awareness of decoration pollution, in order to promote the healthy and sustainable development of interior design, in the interior design should actively adopt green new materials, active use of renewable materials, the only way to promote the scientific development of interior design and effective innovation.

2.3 Innovation Using Different Colors

In the interior design innovation, the color is more obvious unit. In the actual use of color, the color components are usually more vivid, in the composition of the more bold and new, and even a large area to use the primary color. As a visual design elements, in the interior design, the use of color, should focus on the following aspects of the problem. First, based on the layout and size of the interior space to choose a different color, if the indoor space is relatively large, then the choice of color, you should choose as much as possible dark system, which can increase the heavy sense of interior space, and pale. If the indoor space is relatively small, then the use of color, you should try to use light-colored system, in order to create a bright feeling.

Second, based on the indoor orientation and spatial orientation to select the appropriate color. Indoor exposure to sunlight there is a big difference in the use of color, need to focus on grasping this distinction and different, targeted to choose the color. Thirdly, the user of the interior space is selected for the color. Different sexes, people of different ages, different people have a world of difference for the color, in the interior design innovation, the choice of color is designed based on the user's personalized differences.

2.4 Furniture and Lighting of the Innovative Design

In the process of interior design innovation, in addition to the form of innovation, the content also needs to be innovative. Interior design content, mainly includes two aspects: furniture and lighting. On the one hand, furniture as an important part of interior design, furniture style and interior design style is only integrated together, it will not appear unexpected; it also can give people a good enjoyment. Furniture designs should change the traditional symmetry, formal traditional form, but should be more personalized to meet the needs of modern use and spiritual needs. Such as some lazy furniture design, it is very good to meet the needs of the otaku houses woman. On the other hand, in the process of interior design innovation, but also the need for lighting the corresponding innovation, combined with interior design style and characteristics, the design of personalized and multi-functional lighting, such as music lamps, or the mode lamps which can switch, KTV mode and so on.
3. Analysis on the Key Function of Interior Design Innovation

Interior design innovation, itself is the proof of social development and the taste of people to enhance the crystallization of the demand. Through the rich and colorful forms of expression to promote the innovation of interior design, not only can comprehensively enhance the overall level of interior design, but also can give full play to the key role of interior design innovation.

3.1 Meet People's Multiple Real Needs

Interior design and the relationship between people are very close, the main foothold of interior design are to provide people with richer, more three-dimensional, more diversified material needs and spiritual needs. Therefore, the realization of interior design innovation, can really meet people's multiple real needs. On the one hand, interior design innovation to meet people's needs, use some advanced design concepts, it is more convenient for people to live and use, making people's lives more modern. On the other hand, interior design innovation, but also to meet people's spiritual needs effectively. With the rapid economic development, people's living conditions continue to improve, people's aesthetic ability to be fully promoted, in this condition, only innovative interior design can meet people's aesthetic needs.

3.2 Supplement the Interior Design of the Research Theory

Interior design innovation and the development of interior design innovation theory about this basis they all are important complement of interior design theory. Interior design theory is a new category, a lot of theoretical results are embodied in a wealth of practical system, it can be said that the overall interior design theory is relatively blank. Therefore, through the interior design innovation theory research, it can make up the theoretical blank of interior design. At the same time, the innovation of interior design theory will guide the design practice profoundly and ensure the expansion and effective deepening of interior design innovation.

3.3 Practical Significance of the Innovative Design of Interior Design

Interior design innovation is based on the needs of the community generated and developed, with the rapid socio-economic development, with the continuous improvement of people's cognitive ability, interior design innovation concept is bound to be a comprehensive scientific development and expansion. Under this condition, the interior design innovation itself can provide a practical basis of the development of interior design. In particular, some rich and diverse interior design methods, will fully guide the development of interior design industry.

4. Conclusion

Interior design innovation is the embodiment of social development, is the product of increased demand, interior design innovation is mainly to be reflected through the space combination, color, material and other forms of expression. Interior design innovation has a key role, not only to meet people's multiple needs, but also to enrich the theoretical basis of interior design, to guide the practice of interior design.
