On the Application of Internet and Multimedia in Vocal Music Teaching

Rui Rui Liu

ABSTRACT

With the development of social economy, people’s material standard of living has risen rapidly, which further broadens peoples' horizons and gradually deepens peoples' spiritual pursuit. Vocal music, which plays an important role in peoples' spiritual life, makes peoples' spiritual life more and more colorful and is loved by most people. meanwhile, It is becoming more and more prominent in education. However, with the rapid development of science and technology, Internet and network multimedia has greatly influenced the traditional vocal music teaching. As is known to us, traditional vocal music teaching is lack of intuitiveness and takes class mode as the purpose of organizing teaching to cultivate students' good habit of correct singing and make students have the ability of singing. Whereas nowadays this kind of art education has become more and more unable to adapt to the changes of information age and the talents who are cultivated in the mode cannot meet the requirements of the society. The application of Internet and network multimedia in vocal music teaching has been increasingly prominent in China's vocal music teaching. Therefore, I will put forward a series of perfect measures to promote the traditional vocal music teaching mode reform, improve the efficiency of vocal music teaching so that cultivate more vocal music talents for the society by searching the Internet and network multimedia technology application in vocal music and some certain problems in the paper.¹

Internet, network multimedia, vocal music teaching, application approach, measures.

INTRODUCTION

Vocal music teaching is different from general teaching. Because only lectures is unable to play its unique charm. On the contrary, It will not only affect students' learning effect and the quality of vocal music teaching, but also cannot meet the social demand for talents in the new period. However, modern Internet and network multimedia has developed rapidly, which has brought certain opportunities and challenges to traditional vocal music teaching. To a certain extent, opportunities outweigh challenges. The application of Internet and network multimedia in vocal music teaching provides a new way for the vocal music teaching, its convenience, intuitiveness, image and any other characteristics is a great shock to the inherent traditional vocal music teaching p. So, we should realize the urgency of the reform of traditional vocal music teaching mode and it is necessary to gradually promote the Internet and network multimedia technology application in vocal music teaching and perfect the new methods of vocal music teaching so as to ensure the smooth progress in vocal music teaching work. The following is a brief analysis of the application of vocal music teaching in Internet and network multimedia:

THE IMPORTANCE OF APPLYING INTERNET AND NETWORK MULTIMEDIA IN VOCAL MUSIC TEACHING

It is helpful for students to improve their comprehensive understanding of vocal music knowledge. Since the teaching time in class is limited, students' theoretical knowledge is relatively insufficient. However, vocal music teaching needs not only enough theoretical knowledge, but also a practical course. If you want to make some achievements in this field, you must master the operating skills of vocal music comprehensively, be able to operate the instrument skillfully, and fully understand the theoretical knowledge. In practice, we are often subject to the traditional classroom teaching, which affects the overall development of students.

It can promote students' enthusiasm in learning and improve teaching efficiency. In the traditional vocal music teaching, restricted by many factors, the way of learning is mainly lectures, which only attaches great importance to the teaching result and ignores the students' autonomy in learning, which affects the teaching efficiency to a certain extent. At the same time, broadcasting vocal music teaching pieces through network multimedia conforms to the needs of the students' learning, which can fully arouse the students' audio-visual senses and get students' attention so
As to make them concentrate on their learning. To a certain extent, in this way can also help the teachers work and improve the efficiency of the class.

It is helpful to build a good and harmonious relationship between teachers and students. With the development of quality education, the new curriculum standard emphasizes more and more on the equal relationship between teachers and students, emphasizes that both teachers and students should make progress in teaching, and gradually establish a good and harmonious relationship between them. The application of Internet and network multimedia technology in vocal music teaching can serve as a good communication link between teachers and students. Teachers can use network teaching to show students rich vocal music teaching resources to meet the overall development of students. At the same time, this kind of network teaching is more vivid and intuitive, which can attract students' attention, improve the enthusiasm of class participation efficiently with teachers' appropriate guidance, and help teachers and students have good interaction and a harmonious and stable relationship between them.

THE SPECIFIC APPLICATION OF INTERNET AND NETWORK MULTIMEDIA IN VOCAL MUSIC TEACHING

It guides students to study independently. Online teaching is a new experience for students. In the current vocal music teaching process, most of the colleges and universities have to be able to configure the Internet and network multimedia equipment, teachers also have mastered the certain professional skills. They can make full use of network video or a variety of different multimedia images to teach according to the different basic level students so as to mobilize students study enthusiasm, attract the interest of students, and help to improve the efficiency of class teaching.

Teachers and students share vocal music resources. If the Internet interacts information timely, teachers and students can use It to download the required information and they can through the network platform to communicate each other to solve problems, in this way, teachers and students can get the maximum rich vocal music learning resources and make progress together. Specifically, on the one hand, in the classroom teachers can use multimedia devices play music, not only correct the deficiency of students singing, help learners to improve singing skill, but also update their teaching ideas and add new contents timely. On the other hand, teachers and students can also consult authoritative experts on various BBS or communication platforms, timely solve puzzles and acquire professional knowledge.
MEASURES TO IMPROVE THE APPLICATION OF INTERNET AND NETWORK MULTIMEDIA IN VOCAL MUSIC TEACHING

Vocal music teaching based on the network information environment, has made a brave new attempt. This modern teaching model plays an increasingly important role in improving the efficiency of vocal music teaching. Therefore, we should try our best to solve some existing problems in order to further promote the development of vocal music teaching. We should strengthen the interaction between teachers and students and fully explore the online teaching resources. To a certain extent, online teaching reduces face-to-face communication between teachers and students, and fails to answer students' questions timely. Therefore, we should strengthen the communication between teachers and students on the Internet network multimedia platform, which can be done in two ways. First, the school should set up a complete curriculum teaching system, so that teachers can communicate with students within a certain period of time, answer the questions timely, and correct students'. Meanwhile, in order to avoid lackadaisical emotions of teachers, schools should include this in the teacher's workload to improve the enthusiasm of teachers to work and guide the students to learn indirectly, which is helpful to improve the efficiency of teaching. Second, teachers and students can also interact with each other as learners. They can set up learning BBS or QQ groups on the Internet, which can not only shorten the distance between teachers and students, but also make resources share on the Internet, make students and teachers speak freely to the maximum extent.

We should establish a good teaching environment for network vocal music. In order that he students' learning initiative should be given full play to as much as possible in the network teaching, We should guarantee that we can establish a stable teaching environment for students to learn in and offer convenience for vocal music teachers and students to use network resources. We can start from these points. First of all, we must be good at combining the various methods such as audios, videos together in the development of network course of vocal music teaching and use multimedia to expand students' various aspects of vision, stimulate students interest in learning to better improve teaching efficiency. Secondly, for students with weak foundation of music, we should also help them choose professional vocal music course resources. Schools set up a teacher-student login window on the Internet teaching platform to save time and facilitate students' learning. Furthermore, in the new period, both the teachers and students should have basic computer skills, Thus both of them should improve their knowledge of network, and master the application of Internet so as to bring convenience to the learning of vocal music.

CONCLUSIONS

With the rapid development of Internet technology and network information technology, the information transmission is becoming more and more rapid. We
should give full play to the advantages of Internet and multimedia technology, use it reasonably for our education career, continuously promote the application of the Internet and network multimedia technology in vocal music teaching in our country, provide convenience for the vocal music learners and improve the quality of vocal music teaching. Although it plays an important role, but we also cannot ignore some good things in traditional teaching and the two should be combined effectively so as to promote the development of modern vocal music teaching and cultivate the vocal talents for the society.
